Claim Rejections - 35 USC § 102

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 25-35 are rejected under 35 U.S.C. 102(e) as being clearly anticipated by Kaish et al.

See the appropriate paragraph of paper 22.

Claims 25-42 and 44 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Clarke (USP 5,139,334) or Clarke et al. (USP 5,225,679).

The Clarke references teach means for measuring a plurality of markers in a petroleum product using Raman, near infrared and mid infrared spectrometers. Quantification of the markers enables determination of the sample without having to do a complete chemical analysis. Additionally, these references teach multiple detectors.

Claim Rejections - 35 USC § 103

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claims 36-42 and 44 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kaish et al.

See the appropriate paragraph of paper 22.

Response to Arguments

Art Unit: 1743

Applicant's arguments filed 7/7/03 have been fully considered but they are not persuasive.

Applicants state the cited prior art fails to teach a device that can detect a plurality of markers creating a concentration ratio that can be compared to a library. The Office maintains the cited prior art teaches the claimed elements and has the capability to perform the discussed functions. It appears Applicants are arguing the method of intended use of the apparatus, which are of no patentable moment with respect to the pending apparatus claims.

Applicant's state Kaish fails to teaches detection of a concentration ratio of the tags. The Offices maintains this argument is directed to a method of intended use and is of no patentable moment with respect to the pending apparatus claims. The Office maintains Kaish teaches the claimed apparatus.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Pauls et al. are not available as prior art, but do teach use of spectrographic techniques to determine relationship between pluralities of dyes in a petroleum sample.
